

Supplier of first class second-hand machinery from Germany

Teutenberg Maschinen, founded in 1966, specialises in the worldwide purchase and sale of first class, fully reconditioned second-hand machinery and complete installations for the production and treatment of semi-finished steel and non-ferrous wires, bars, tubes, sheets, strips and plates.

The company can supply equipment from major manufacturers such as:

- *Schumag* – combined drawing machines, peeling, straightening, centreless grinding/polishing and chamfering machines
- *Kieserling* – peeling and straightening machines, pointing machines and chain draw benches
- *Calow/Hetran/SMS* – peeling machines
- *SMS* – pilger mills and extrusion presses
- *Bültmann* – drawing, peeling and straightening machines

- *Dahlhaus* – drawing and straightening machines
- *Mannesmann Meer* – pilger mills, drawing and straightening machines
- *Lidköping* – centreless grinding machines
- *Asmag* – drawing and straightening machines
- *Wafios/Vitari/MRP/Koch* – straightening and cutting machines
- *Niehoff/Herborn* – drawing machines
- *Breitenbach*
- *Fuhr/Bühler* – rolling mills
- *Krollmann* – pointing machines
- *Strecker/Ideal* – butt welding machines
- *Schlatter/Strecker/EVG* – mesh welding machines
- *Ungerer* – sheet straightening machines

Teutenberg Maschinen stocks more than 100 special machines in a floor area of around 3,000m². It can also offer new or hardly used machines that have either

been sold by their previous owners owing to reorganisation measures or company liquidations.

The company's special-purpose production machines and installations can give potential new users many years of service, enabling them to achieve considerable savings in capital expenditure.

Teutenberg can submit detailed quotations, and requests that its stock numbers are quoted in enquiries.

It also invites enquiries for machines not mentioned in the stock list, as it acts as agent for the sale of large-scale plants still standing on their owners' premises.

High speed saw cuts up to 11,000 tubes per hour

Kent Corporation has taken an order for its stock Bewo high speed cold saw. The new SCF-90 cuts one to six tubes simultaneously, giving extremely high cut rates of up to 11,000 per hour.

The saw head cuts upward, which leaves most chips below and requires less cutting force. The fully hydraulic helical saw head is very robust, with minimal backlash. It is variable and the saw head is proportional feed through the tube to optimise cut quality, blade life and production rates.

Tubes are fed via servo feed that ensures accuracy and enables up to ten different lengths to be cut from a single stock length of tube. The main control panel automatically selects the most efficient settings based on the entered job. All settings are very quick, and automatically controlled at the panel.

Special hotel options for Pipe & Tube World Conference 2011

The ITA has negotiated special hotel room rates for speakers and delegates participating at the Pipe & Tube World and concurrent CabWire World Conference events in Düsseldorf in November. **These rates are subject to availability at time of booking.** One of the designated hotels, the Schnellenburg Hotel, is already full.

The Radisson Blu Scandinavia Hotel is a recently refurbished 4* establishment located about 1.5 kilometres from the Congress Center. Special conference delegate rate for a single is €128 per night including breakfast, service and VAT. The booking deadline is 10 October 2011. (Please note that there are two Radisson hotels in Düsseldorf so please take careful note of the address on the booking form.)

To download a hotel booking form please visit the conference website www.itatube.org/dussconference.php and note that all reservations should be made direct with the hotels.
